

**In the Specification:**

Cancel the paragraph Page 3, lines 9–19, and substitute therefore the following:

— According to one aspect of the present invention, there is provided a motorized syringe for producing a controlled, slow-delivery of a fluid-like substance, comprising: a housing having, at one end, an expansible-contractible chamber for receiving a quantity of said fluid-like substance, and an outlet for discharging said substance upon the contraction of said chamber; and a drive at the opposite end of said housing, said drive including an electrical motor and a plunger driven by said electrical motor for contracting said chamber to discharge said substance via said outlet; said housing comprising a first section housing said expansible-contractible chamber and a second section housing said drive; said first housing section including a septum for filling said expansible-contractible chamber by injection. —
